OpenCart 4.1.0.3 Module Compatibility Report

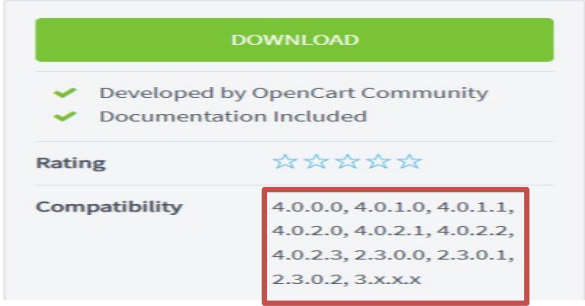

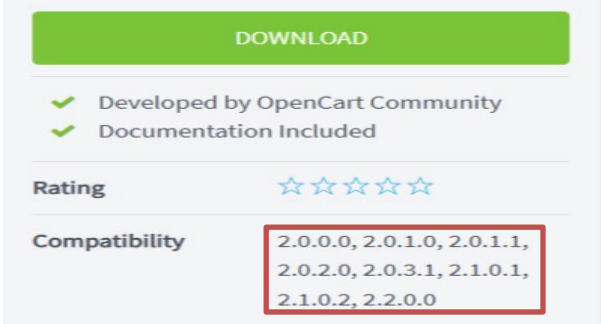

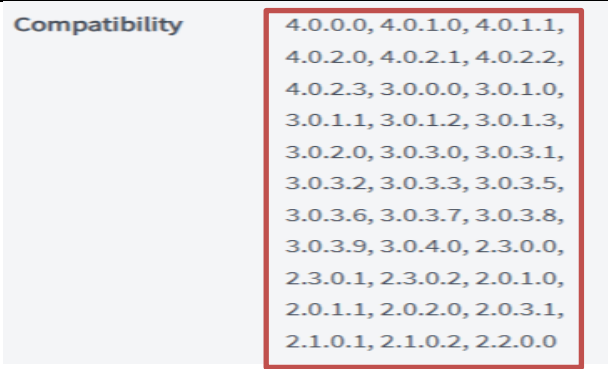

Module Support Description

OpenCart version 4.1.0.3 introduces significant architectural changes, specifically moving towards a more streamlined event-driven system and stricter coding standards. Consequently, many legacy modules designed for version 3.x or early 4.0.x iterations are no longer natively compatible. The primary reason for non-support includes changes in the extension installer, modifications to the Twig rendering engine, and the deprecation of older library dependencies. Users attempting to install these modules without manual code updates will likely encounter 'Undefined Index' errors or template rendering failures.
