Problem	Screenshots
Dashboard can have some information about companies top vendors with their company information. Showing signout button in dashboard is making it unprofessional also logout button exists in profile icon.	
Make Number section specific which one to give like Telephone number, Mobile number with one sample example of numbers.	
Even if I give invalid url of website it is always showing right tick mark. It should check browser and make clear if the site exists or not. If not then cross mark should be shown.	
What does it mean by preferred Port of Loading?	
You can see Company Profile is done saving. But I have used wrong website.	

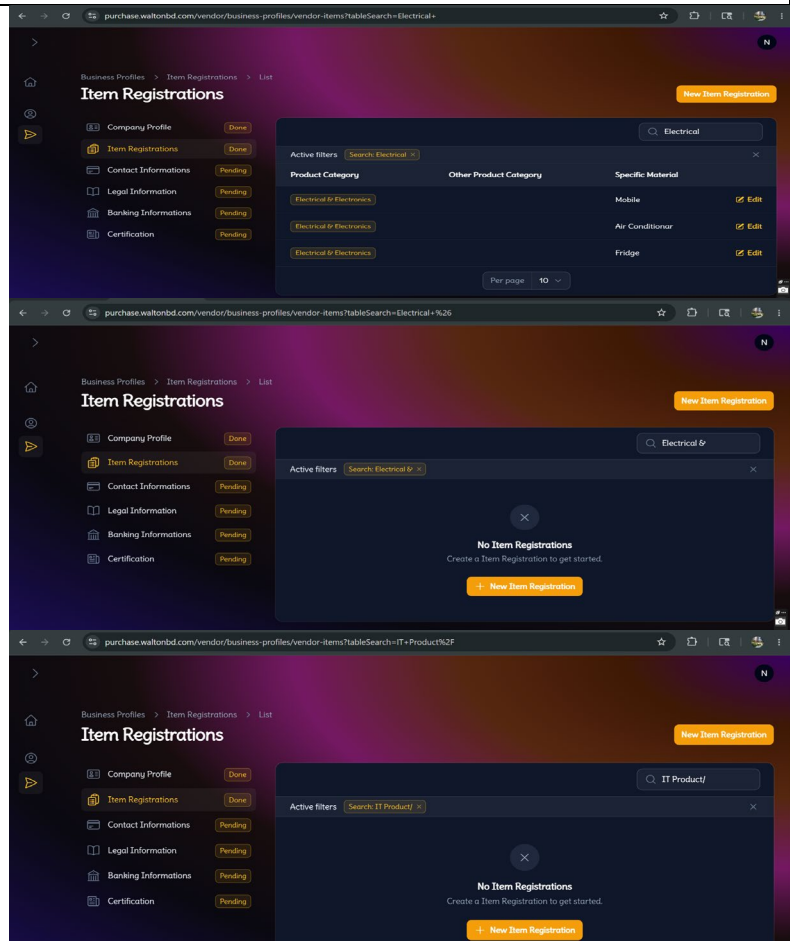

Currently, created items are not visible instantly. Vendors need a **'My Registered Items'** list view to track their progress, avoid duplicates, and easily identify which items are still missing from their profile.

What the second column does? There was no form for 2nd column at the time of registering new item.

The search bar fails to display results when using special characters like the "&", "/" symbol (e.g., searching for "Electrical & Electronics"). Even if items exist, it shows "No Item Registrations."

Without adding Wechat and Visiting card information contact information can be saved. If any form is important to fill make them must fill.

File of invalid type showing after browsing doc file. It should have said earlier on that form title that pdf only or valid files extensions.

- **Valid Files:** The "X" (remove) button is placed on the **right side** of the green bar.
- **Invalid Files:** The "X" (clear) button is placed on the **left side** of the red error bar.

This inconsistency can confuse vendors. A user might accidentally click the wrong area or struggle to find the "clear" button quickly when fixing an error, leading to a frustrating upload process.

Vendors who resign or change companies need a way to delete their old data. But there is "edit" button no delete "button".

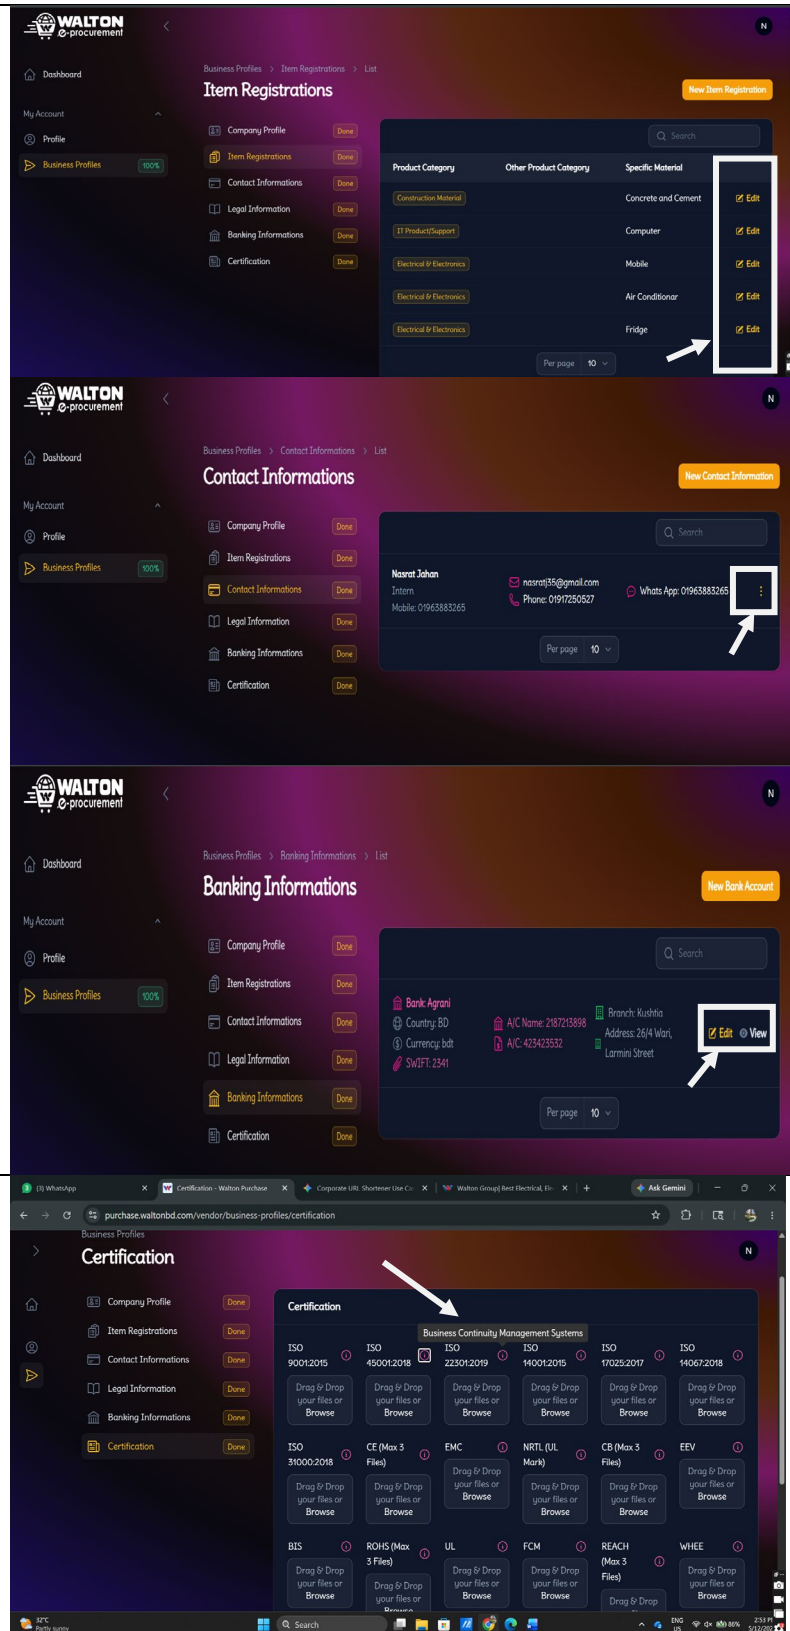

Make the **IBAN** field optional for Inside countries vendors. Local bank transfers only require the Account Number and Routing Number. IBAN should only be mandatory if the vendor is registered as an 'International Vendor'. Also I don't know about **Swift code** and **Routing Number**

I think there is no need to show all the container along with drag and drop option. Let one drop down menu bar where vendor will select one option and under that option there will have drag and drop option to drop files.

There should have “New Password” instead “Password”. Because it is not clearing exactly which password it needs.

Profile icon should be clickable. It can show vendor information with their image. Clicking on My Account option taking vendor to My Profile. Instead it can take user to My Account page with two options Profile and Business Profiles. Or it can be removed as in left sidebar it already exists.

Edit button is not consistent with different places. Consistency is the best practice for professional website.

Vendors often need more details on what specific documents are required for these ISO or CE certifications. Clicking should open a small Modal or Popup with a detailed description of that specific certification and a sample of the required document.
